GlobalCapture®

Document Capture Automation

- **GlobalCapture® Convey**
(Economic - Up to 4 CPU cores)
- **GlobalCapture® Convey PLUS**
(Flexible - Up to 4 CPU cores)
- **GlobalCapture® Production Server**
(Scalable - Up to 12 CPU cores)

Applications to Classify and Distribute
critical documents in your company

GlobalCapture® is Business Intelligence

> How it works ?

With the GlobalCapture® design module, it is simple to apply documentary processes from the administrative web interface, where you can define each step of the documentary transformation by placing several activities within the workflow.

1. Capture

Capture documents from your multifunctional printer, scanner, email server, or even a watched network directory, providing the flexibility to gather document information from virtually any source.

3. Extract

Extracts information from your documents using the powerful OCR (Optical Character Recognition) tool, Bar Code Recognition, Tabular Data Extraction, Database Search and others.

5. Route

Automatically route your documents to the correct destination, including shared folders on your network that GlobalCapture® creates and names on demand. With automatic e-mail notifications, users are informed when new documents are available.

2. Classify

Use forms recognition to automatically classify and capture your documents. With Rapid Adapt learning, new forms can be created on the fly for ongoing training of the capture process.

4. Validate

Checking the integrity of your information before it's released downstream is critical to any type of process automation. GlobalCapture provides OCR confidence reporting, and other validation checks including data type mismatches.

6. Release

In addition to a file share, GlobalCapture can also release your documents to almost any document management solution, including direct integration with GlobalSearch® ECM Software, Microsoft SharePoint y otros.

> Key Points and Benefits

GlobalCapture® converts documents into useful data that help you make decisions, automatically improving work efficiency and productivity in your company.

Friendly

GlobalCapture® has a friendly design platform with web interface for the creation of workflows.

Flexible

For small or high volumes, GlobalCapture® allows you to add the processing capacity or users to your license profitably.

Mobility

Access the interface of the application from anywhere through any modern browser. GlobalCapture® has web technology and a comprehensive graphic designer.

Scalability

Designed to grow together with your company, GlobalCapture® offers the flexibility to acquire what you need and add according to your needs.

> Why GlobalCapture® ?

Easily Configured Scalability

Administrators can quickly set up multiple processing engines to handle larger volume workloads, while easily adding and removing threads for varying processing loads.

No “Per Page” Licensing Requirements

GlobalCapture’s licensing scales based on server processing cores rather than page counts. This means your processes will never shut down unexpectedly at the end of a busy month.

Feed the Engine of Process Automation

High value data mined from your documents can be easily shared across the enterprise and the applications you use most including Accounting, ERP, CRM and BPM platforms.

Powerful Email Processing

You’re not limited to extracting information from scanned images. You can seamlessly capture emails with their attachments and search across everything to find the information you need.
